Gitflow with Sourcetree

How to begin your work:

1. Make sure your **active branch is „develop"** .
   (If not double click until a circle appears).

2. Click **„Pull"**

3. **Create a new feature** by clicking the Git-flow icon and „new feature"

4. **Enter a reasonable *<feature name>,*** for the feature you are working on.
   This will also be the name of the feature branch.

> During the entire work on this feature make sure that your active branch is the branch of the target feature (indicated by a small circle and bold font).

How to finish you work:

1. Did you **really were in the *<feature name>* branch** while working ?
   If it's not active although you just worked on it you should
   call your git administrator.

2. Click **„Commit"**. Only stage files that are meant to be so.

3. **Enter a descriptive commit message** after thinking one minute.

4. Click **„Commit"** next to the textbox.

5. **Make develop active** by double clicking it.
   (The text „develop" should be bold and preceded by a circle).

6. Click **„Fetch"** and confirm.

7. Click **„Pull"** and confirm.

8. **Make *<feature name>* branch active** by double clicking it.
   (The *<feature name>* branch should be bold and preceded by a circle).

9. **End the feature** by clicking the Git-flow icon and „end feature".

10. **Make develop active**
    (double click it to make it active, indicated by a small circle and bold font).

11. Click **„Push"**.

> If you ever come across any red messages call your git administrator immediately!

> *Pull every day so tears stay away.*
> *Communicate so you dont hate.*
> *Don't try to fix what you did break.*
